ColdFire Development Tools

Leveraging Relationships for *ColdFire*

ColdFire architecture designed to aid developers in creating high quality, feature rich tools for mutual customers

Continously adding to the ColdFire tools list

Complete solution package to customers during sales

... Not just evaluation boards, but integrated tools

... Compiler, debugger, RTOS if needed, emulator solutions-- BDM and full in-circuit

Extensive breadth and depth of solutions for customers

... Low cost solutions with GNA tools and $100 BDM cables

... More expansive solutions with highly optimizing compilers, source-level/system-level/RTOS-aware debuggers, complete development environments with integrated tools, emulators with realtime trace capabilities
